

Software Engineer - Dart & Flutter for Desktop

At AiDx Medical we design and develop an affordable automated slide scanner and microscope for point-of-care diagnostic assistance in resource-limited settings. We aim to transform diagnostics with AI and are driven by a steadfast commitment to improve wellbeing and equity and make rapid and reliable diagnostics accessible for all. Additionally, by empowering community healthcare workers with the necessary training and resources, we build capacity within communities, enabling them to play a pivotal role in disease prevention, early detection, and treatment.

We are looking for a Dart software engineer to join our team to lead and develop the user interface software of our automated slide scanner and microscope. Over the last years we have had feedback from our users and ideas to improve the UI/UX. In this role you will go over the existing idea's and come up with new ideas, evaluate the feasibility of execution. After that you will implement new features and iterate based on tests in collaboration with users in the field.

What is expected of you:

- Experience programming in Dart and Flutter
- Experience with UI/UX design
- English speaking
- Able to work onsite in Schiedam
- Interest to work in a cross cultural team
- Interest in working in the medical sector
